Components

- My profile-photo coverage accepts only jpeg, jpg and png files, with a maximum file size of 10 MB. I verify these validation messages: "Unexpected file format. Supported file type jpeg, jpg and png." and "File size too large. Files cannot be larger than 10MB."
- For First Name and Last Name, I test the 50-character limit, reject numbers and special characters, and verify that both fields are mandatory.
- For Email, I verify that the value follows a valid e-mail format and that the field cannot be left empty.
- For Password, I verify a minimum length of 8 characters with at least one uppercase letter, one lowercase letter and one number. I also verify that both Password and Password Confirmation are required.
- For Country, I verify the country combobox behavior. State becomes enabled only when United States is selected; for every other country, State remains disabled. Country selection is mandatory, while State is optional.
- For Organization Type, I verify the four available values - College, Academy, Individual and Other - and confirm that only one option can be selected. Organization Type is mandatory.
- For Organization Name, I verify that the field becomes editable only when Other is selected. In every other organization type it remains disabled. The field accepts up to 100 characters, allows numbers and special characters, and is optional.
- For Birthdate, I verify that the calendar opens with a default date 18 years earlier than the current day.
- I verify that users under 18 cannot register and that selecting a birthdate is mandatory.
- I verify that Terms & Conditions opens the terms-of-use URL and that its checkbox is required before registration can continue.
- After CONTINUE is selected, I verify that the user is redirected to the success page and that a verification link is sent to the entered e-mail address.

Case-2 Registration Page - Bug Finding and Reporting

For this case, I reviewed the registration screen for visible defects and documented the issues as bug tickets in a clear reporting format.
